

Institute of Computer Technology
B. Tech Computer Science and Engineering

Sub: Identity and Access Management (2CSE507)

Name - Nisarg Prajapati

Branch - Cyber Security

Enrollment no. – 23162171019

Semester - 5

Class - A

Batch – 52

PRACTICAL NO:- 10

Aim : Identity feeds exercises

Exercise 1 : Creating a comma separated value (CSV) identity feed

AJK Enterprises hired a number of new employees to work in the finance department. In this exercise, you create a new identity feed (service) to load these new employees from a comma-separated value file into IBM Security Identity Manager. You also create several new IBM Security Identity Manager users.

1. Log in to the IBM Security Identity Manager Administrative Console as the system administrator with the user ID itim manager.

2. On the Home tab, navigate to Manage Services.
3. Click Create.

The screenshot shows the 'Manage Services > Select a Service' page. The title bar says 'Manage Services'. The main content area has a heading 'Manage Services > Select a Service' with a sub-instruction: 'To locate a service that you want to manage, type information about the service in the field, select search options, and then click Search. The services that match your criteria are displayed, clicking Search will search the system based on the beginning letters of the item you are searching for. To search for a textual pattern in the middle of an item, use the '*' symbol wildcard. (For example, typing "b*" will find "abc").' Below this are search filters: 'Search information' (text input), 'Search by' (radio buttons for 'Service' or 'Business unit'), 'Service type' (dropdown menu set to 'All'), 'Status' (dropdown menu set to 'All'), and a 'Search' button. A horizontal line separates this from the 'Services' section. The 'Services' section has a sub-instruction: 'To perform a particular task on a service, click the icon next to the service name, and then select the task you want to perform.' Below this is a table with columns: Create, Change, Delete, Export Access Data, Import Access Data, Enable Access, Disable Access, Refresh, Select, Stat..., Service Name, Description, Service T..., Business ..., Access Name, Access Status, Access Type. The table shows 'Total: 0', 'Displayed: 0', and 'Selected: 0'. At the bottom left is a 'Close' button.

4. Confirm that the Finance business unit is selected or Click Search in front of Business Unit and Select Finance .
5. Select Comma Separated File (CSV) identity feed and click Next.

Create Service

Manage Services > Create a Service > Select the Type of Service

To create a new service, select the type of service that you want to create, and then click Next. If the type of a custom service type.

*Business unit
Finance

Select	Service Type	Description

Page 1 of 1 | Total: 11 | Displayed: 11 | Selected: 1

< Back

6. Complete the Create a Service form with the following information:

Create Service

Manage Services > Create a Service > Service Information

To use a service, specify the name of the service and information to connect to it. Then, click Finish.

*Service name
CSV Identity Feed

Description
CSV Feed for finance users

*File name
/classfiles/data/newhires_finance.csv

Use workflow

Evaluate separation of duty policy when workflow is used

Person profile name
Person

*Name attribute
uid

Placement rule
return "ou=Finance";

< Back

7. Click Test Connection.

Manage Services > Create a Service > Service Information

To use a service, specify the name of the service and information to connect to the server where the service resides. To test the connection to the service, click Test Connection. Then, click Finish.

Service name: CTGIMU108
CSV Identity Feed

Description: CSV Feed for finance users

File name: /classfiles/data/newhires_finance.csv

Use workflow

Evaluate separation of duty policy when workflow is used

Person profile name: Person

Name attribute: uid

Placement rule: return "ou=Finance";

< Back | Next > | Finish | Cancel | Test Connection | Close Message

8. If the connection is successful, click Finish. If it is not, check that you entered the file name correctly.
9. When you see the message that you successfully created the CSV Identity Feed, click close.

Manage Services > Create Service > Success

You successfully created the **CSV Identity Feed** service on the **Comma Separated File (CSV) identity feed** service type.

Other Tasks

[Create another service](#)

[Close](#)

10. From Manage Services > Select a Service, click Refresh until the new service is shown in the list.

Services

To perform a particular task on a service, click the icon next to the service name, and then select the task you want to perform.

bweir,Weir,Robert Weir,Robert,bweir@jke.test,232222,N,Sue Thomas,P@ssw0rd
```

16. Close all the tabs.

Exercise 2 : Creating a Directory Services Markup Language (DSML) identity feed

In this exercise, you populate IBM Security Identity Manager with a list of developers at JK Enterprises using a new identity feed (service). This feed reads data from a DSML file and uses that information to create IBM Security Identity Manager users for the Development business unit.

1. On the Home tab, you go to Manage Services.
2. Click Create.

The screenshot shows the 'Services' page with the following details:

- Header:** Services, Create, Change, Delete, Export Access Data, Import Access Data, Enable Access, Disable Access, Refresh.
- Search Bar:** 2 results found for: *
- Table Headers:** Select, Stat..., Service Name, Description, Service T..., Business ..., Access Name, Access Status, Access Type.
- Rows:**
 - CSV Identity Feed: CSV Feed for finance users, Comma Separated File (CSV) identity feed, Finance, Access Enabled.
 - ITIM Service: ITIM, JK Enterprises, Access Disabled.
- Page Navigation:** Page 1 of 1, Total: 2, Displayed: 2, Selected: 0.

3. Select the Development business unit. Click Search in front of Business Unit and Select Development .
4. Select DSML identity feed and click Next.

The screenshot shows the 'Create Service' wizard, Step 2: Select the Type of Service:

- Left Panel:** Select Type, Additional Steps...
- Right Panel:**
 - Search Bar:** Manage Services > Create a Service > Select the Type of Service. To create a new service, select the type of service that you want to create, and then click Next. If the type a custom service type.
 - Business unit:** Development, Search...
 - List:** Select, Service Type, Description.
 - AD OrganizationalPerson identity feed
 - Comma Separated File (CSV) identity feed
 - DSML identity feed**
 - Hosted service
 - IDI data feed
 - INetOrgPerson identity feed
 - LDAP profile
 - POSIX AIX profile
 - POSIX HP-UX profile
 - POSIX Linux profile
 - POSIX Solaris profile
 - Page Navigation:** Page 1 of 1, Total: 11, Displayed: 11, Selected: 1.

5. Complete the Create a Service form with the following information:

The screenshot shows the 'Create Service' dialog box. On the left, there's a sidebar with 'Select Type' checked and 'Service Information' expanded. The main area is titled 'Manage Services > Create a Service > Service Information'. It contains fields for 'Service name' (DSML Identity Feed), 'Description' (Load Dev Team through DSML Feed), 'User ID' (empty), 'Password' (empty), 'File name' (/classfiles/data/development.dsml), and 'Placement rule' (return "ou=Development";). There are also two unchecked checkboxes for 'Use workflow' and 'Evaluate separation of duty policy when workflow is used'. At the bottom, there are buttons for '< Back', 'Next >', 'Finish', 'Cancel', and 'Test Connection'.

6. Click Test Connection.

The screenshot shows the 'Create Service' dialog box after testing the connection. A message box appears in the center with the text 'CTGIMU1211: A connection was established to the service successfully with non secure communication. See InfoCenter to configure secure communication.' with an 'Close Message' button. Below the message, the 'Service name' field still shows 'DSML Identity Feed' and the 'Description' field shows 'Load Dev Team through DSML Feed'.

7. If the connection is successful, click Finish. If it is not, check that you entered the file name correctly.
8. When you see the message that you successfully created the DSML identity feed, click Close.
9. From Manage Services > Select a Service, click Refresh until the new service is shown in the list.
10. Click the small triangle to the right of the new service name and click Reconcile Now.

Services

To perform a particular task on a service, click the icon next to the service name, and then select the task you want to perform.

3 results found for: *

14. You can also review the contents of development.dsml to confirm that the data looks correct. Open it in Text Editor Icon from desktop.
 15. Close all the tabs.

Exercise 3 : Creating an LDAP InetOrgPerson identity feed

JK Enterprises recently acquired PDQ Inc. to increase its business presence in the Asia Pacific region. In this exercise, you create a new identity feed (service) that simulates reading data from a Lightweight Directory Access Protocol (LDAP) server at PDQ Inc. You also automatically create new IBM Security Identity Manager users from the directory contents.

Preparing for the load

You will import users from the PDQ LDAP Server which for the purposes of this class, is the same LDAP server that is installed on the class computer.

The PDQ user entries are stored in the directory under ou=sales, o=PDQ.

You can use LDAP Browser or Web Admin tool to browse those users. Open the LDAP Browser from Desktop. Select PDQ INC from session list and click on connect. Expand O=PDQ then Expand ou=sales. Confirm there are five users in the PDQ organization to import with this identity feed.

Creating and testing the identity feed

1. Log in to the IBM Security Identity Manager Administrative Console as the system administrator with the user ID itim manager.
2. On the Home tab, navigate to Manage Services.
3. Click Create.

Services

To perform a particular task on a service, click the icon next to the service name, and then select the task you want to perform.

Notice that the users are imported but marked as inactive. IBM Security Identity Manager marks the users inactive because they do not have a userPassword attribute set in the source LDAP.

13. To activate each user, select the user and click Restore and then click Submit and then Click Close. Repeat these steps for each inactive users.

14. Close the Reconcile Now tab.

Exercise 4 : Creating a IBM Security Directory Integrator identity feed

In this exercise, you configure IBM Security Directory Integrator to provide an identity feed. You import an existing configuration file that includes the completed assemblyLines for the identity feed.

1. Launch the IBM Security Directory Integrator editor with the following command: Open the terminal and enter

```
/opt/IBM/TDI/V7.2/ibmditk
```

2. If you are prompted to select a workspace, accept the default location and click OK.

3. Import the pre-built configuration file by clicking File > Import. Select IBM Security Directory Integrator > Configuration and click Next.

4. Select File Radio Button. Use /classfiles/data/csv_isim.xml for the Configuration File. Click Finish

5. When prompted for the Project Name, use CSV_ISIM. Use the default location. Click Finish to create the project and finish the import.

6. In the Navigator panel, expand CSV_ISIM > AssemblyLines to show the two assembly lines in the project.
7. Double-click CSVtoISIM to open the assemblyLine editor.

The CSVtoISIM assembly line reads records from the file /classfiles/data/people.csv and maps the values in each record to inetOrgPerson attributes that IBM Security Identity Manager can process.

8. Click Show Mapping to display the attribute mapping table.

9. The mapping table has three columns. The right column shows the attributes names from the source CSV file. The left column shows the inetOrgPerson attributes that are passed to IBM Security Identity Manager. The middle column shows the JavaScript that performs the mapping from the CSV attributes to the inetOrgPerson attributes.
10. Close the CSVtoISIM tab to close the CSVtoISIM assemblyLine.
11. Double-Click the ISIMListener AssemblyLine.

12. The ISIMListener is the primary assemblyLine in the configuration and listens for requests from IBM Security Identity Manager. The logic in the Data Flow section queries the request type from IBM Security Identity Manager. If the request is for a reconciliation, the ISIMListener assembly line calls the CSVtoISIM to read a record from the CSV file. The results from the CSVtoISIM assembly line are collected and then passed back to IBM Security Identity Manager.
13. Click Run in Console to start the assembly line. The assembly line initializes and waits for requests on port 8800.

14. The Assembly Line is running successfully when you see a message similar to the following:

Listening for DSML connections on port 8,800

You have now configured a IBM Security Directory Integrator identity feed that is listening for requests on port 8800. IBM Security Identity Manager connects to the IBM Security Directory Integrator identity feed through this port to load the people that are listed in the CSV file into the IBM Security Identity Manager organization tree.

Exercise 5 – Creating identities with a IBM Security Directory Integrator identity feed

In this exercise, you create an identity feed service to use the IBM Security Directory Integrator configuration you just started. You then run a reconciliation to load the users into IBM Security Identity Manager. This exercise demonstrates the importance of properly designing the placement rule for a service to match the fields in the identity feed. Errors can result when you add users to the wrong place in the organization tree, possibly provisioning unintended resources and entitlements.

1. Log in to the IBM Security Identity Manager Administrative Console as the system administrator with the user ID itim manager.
2. On the Home tab, go to Manage Services.
3. Click Create to add a new service.

Services						
To perform a particular task on a service, click the icon next to the service name, and then select the task you want to perform.

5. Use the following information to complete the Create a Service form:

Create Service

<input checked="" type="checkbox"/> Select Type <input type="checkbox"/> Service Information	Manage Services > Create a Service > Service Information To use a service, specify the name of the service and information to connect to it. Then, click Finish. *Service name <input type="text" value="TDI feed"/> Description <input type="text"/> *URL <input type="text" value="http://isim.test:8800/"/> User ID <input type="text" value="itim manager"/> Password <input type="password" value="*****"/> *Naming context <input type="text" value="dc=IDIFeed"/> <input type="checkbox"/> Use workflow <input type="checkbox"/> Evaluate separation of duty policy when workflow is used *Name attribute <input type="text" value="uid"/> Placement rule <pre>var deptNum = entry.departmentnumber[0]; var placementLoc="ou=Finance"; if (deptNum == "Fin") placementLoc="ou=Finance"; if (deptNum == "Supp") placementLoc="ou=TechSupport"; if (deptNum == "Sales-Amer") placementLoc="l=Americas, ou=Sales";</pre>
<input type="button" value="< Back"/> <input type="button" value="Next >"/> <input type="button" value="Finish"/> <input type="button" value="Cancel"/> <input type="button" value="Test Connection"/>	

If you have problems with the exact syntax of the placement rule, the text for the JavaScript is in the file /classfiles/scripts/ IDI_placementrule.js. Open Terminal and type the command gedit /classfiles/scripts/IDI_placementrule.js to open the file in a graphical editor and you can copy the JavaScript and paste it into the Placement Rule field of the web browser.

6. Click Test Connection to test the connection to the Server Connector. If the test connection fails, make sure that the assembly line is running.

Manage Services > Create a Service > Service Information

To use a service, specify the name of the service and information to connect to the server where the service resides. To test the connection to the service, click Test. Then, click Finish.

CTGIMU109E A connection was established to the specified service successfully.

[Close Message](#)

*Service name

- Assuming a successful connection test, click Finish to submit the service definition.

Create Service

Manage Services > Create Service > Success

You successfully created the **TDI feed** service on the **IDI data feed** service type.
